No SQL And Serverless: Mongo DB & Supabase

Version Control: Git & GitHub

Design And Prototyping: Adobe Xd & Figma

Others: CSS4, HTML5, Gulp, SEO & E-commerce

WORK EXPERIENCE & PROJECTS

Professional Freelancer - Upwork And Beyond,

2022 - present

- Am helping individuals, startups and SMEs turn their ideas to life from mockups to deployment. For example I designed and developed poloti.com platform for a client

that allowed real estate agents to list their mortgages and estates, manage their acquisitions and assets, and also build a personal brand, and it was a full-stack project I worked on alone from mockup design, prototyping to minting down the actual 500,000 plus lines of code for front and backend to final deployment and shipping of the product.

Graphics Designer And Marketing Manager - Shetam Consults Ltd,

June 2021 - November 2021

- Branded and designed various work for the company customers including corporate headed papers, branded envelopes, business cards, logo designs and a lot more!
- Curated and executed the company marketing strategies and also managed it's digital presence!

Frontend Developer - Freelance Uganda,

Part Time

- Suggested and implemented a redesign of their website after using it as a freelancer and a user myself and finding it's UI & UX improvable.

Frontend Developer - Doctor's Arch International Organization,

October 2020 - July 2021

- My first role, from being a junior developer I went to mid level as I worked for this startup remotely for almost a year until my contract ended.
- I implemented designs and assignments as they were given to me by seniors and later on started also suggesting and owning some of the designs however much everything like samples or links remained non disclosable from that position and onwards.
- I developed a complex data hub which illustrated and visualized data in various techniques, I first made the frontend in plain HTML and CSS but later changed the codebase to react with more added functionality and visuals like data grids, pie charts, graphs and real time synchronization with additions in database as the data was collected in field and put into an SQL database.
- Through various iterations of the project, I became more proficient in frontend that I started developing my own CSS framework and mini data visualization component

library. Here is an idea of how it was (<https://gamers-reports.netlify.app>) and (<https://gamers-datahub.netlify.app>)

Open Source Contributions And Developer Community Relations

- I have developed and maintained a full fledged feature rich CSS framework along with some community contributions called Serato CSS (<https://github/husseinkizz/serato-css>)
- Am an active member of various developer communities and projects including PROSEIT in Uganda, Hyper UI tailwind CSS project, Open Props, Google Developer Communities, Google African Developer Scholarship Program, Andela Learning Community, Etc.
- I have built various developer facing projects such as Duotone Theme a visual studio code theme that has over 10,000 plus developer downloads, dev-index that helps learning developers and Raising developer twitter list that helps bring in public developing country based developer tweets to the party, and of course engaging in a lot of startup hustles too!

EDUCATION AND CERTIFICATIONS

Formal: Uganda Certificate Of Education (UCE), 2018 - 2019

Digital: JavaScript Course Certification - Sololearn (1024-19545796), GADs Certificate Of Participation (A90DBF36EBBE8F76), Free Code Camp, Google Digital Marketing Fundamentals Course, W3 Schools, etc
